

Beta Training Analysis

Hao Jia

Beta Training Efficiency Comparison (10 iterations)
Trained Model (4 x 512)

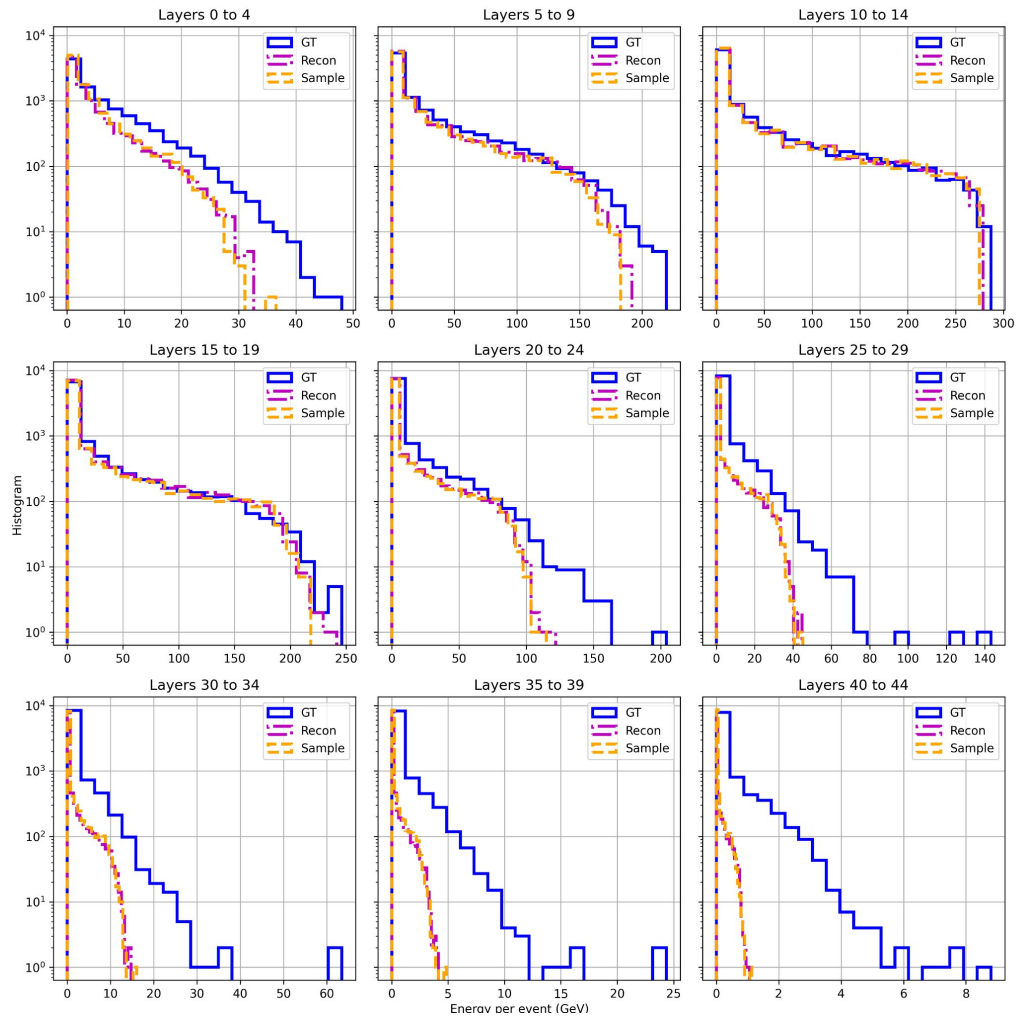

Performance Comparison of MC and QPU
threshold const = 2.0

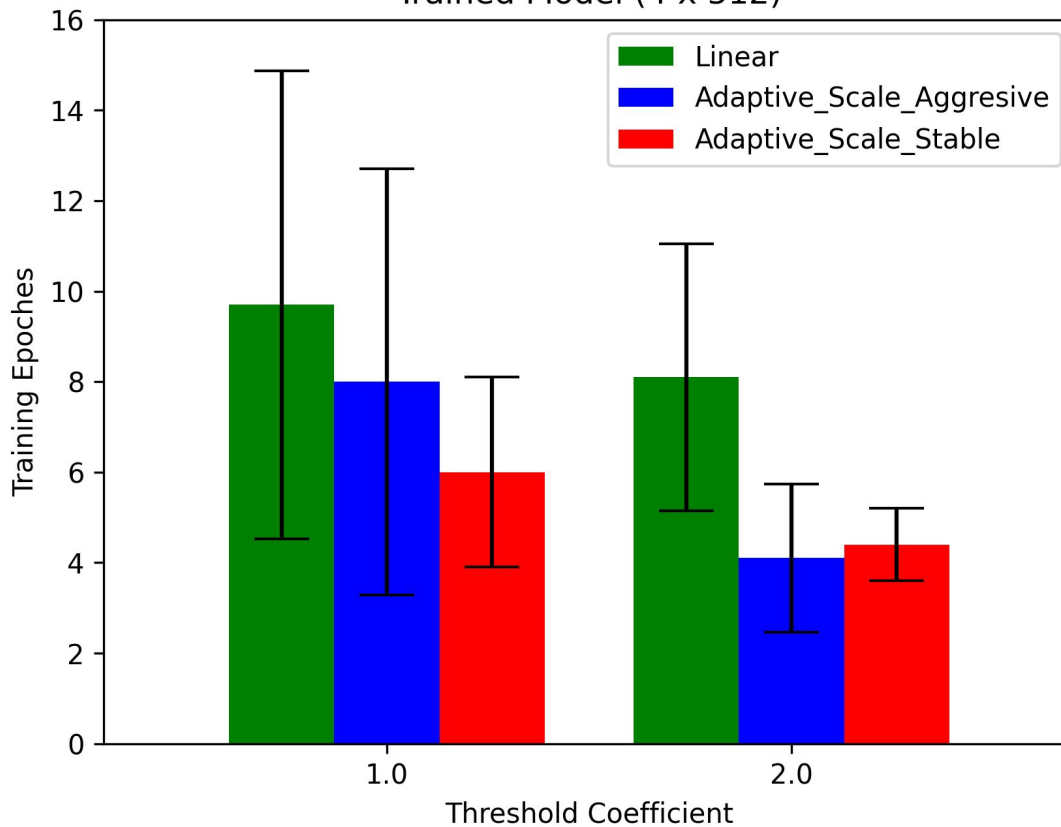

Performance Cpmarison of MC and QPU
threshold const = 2.0

Beta Training Efficiency Comparison (10 iterations)
Trained Model (4 x 512)

For adaptive scale method:

$$|f'_\delta(\beta_{QA})| = \begin{cases} |1 + \frac{\sigma_{QA}^2}{\langle H \rangle_{B(1)}}|, & \delta = 1 \\ |1 + \delta \frac{\sigma_{QA}^2}{\langle H \rangle_{QA}}|, & \delta \neq 1 \end{cases}$$

$$|f'_\delta(\beta_{QA})| < 1$$

When $f' = -1$: Max training power

When $f' = 0$: Most stable
