## Deep Learning Applications to Medical Imaging

*Friday, 23 August 2019 13:30 (30 minutes)*

Medical imaging has revolutionized medicine. Now medical imaging itself is witnessing a deep learning revolution. Clinically-relevant medical image interpretation tasks (e.g. image segmentation and image classification) have been re-formulated under a deep learning framework with impressive results. These early successes have been attributed to three factors: data, learning algorithms, and fast computation. I will present examples of deep learning applications to medical imaging from our research group highlighting the versatility, opportunities, and challenges in this area (website: [www.MedicalImageAnalysis.com](http://www.MedicalImageAnalysis.com)).
